Alerting Abstract EP A

The compsns. contain, per 100pts. PVC, 0.001-2, partic. 0.005-1 pt. at least one polyorganosiloxane (I) block or statistical polymer of average formula (I) R = Me or Ph, at least 60 mol % being Me; R1 = linear or branched 1-18C alkylene hydrocarbon gp.; p = 1-30; q = 1-100. (I) has no. average mol. wt. 600-10,000. R1 = trimethylene or 2-methyltrimethylene, R = Me, p = 2-20 and q = 2-30. Compsn. is PVC plastisol or rigid or plasticised PVC.

USE/ADVANTAGE - (I) as defoaming agent and/or lubricatant for PVC plastisols or rigid or plasticised PVC (claimed). (I) does not exude and is not readily deposited in moulding machine, avoiding need for cleaning to prevent thermal decomposition of deposits; weldability of compsn. is unaffected.

I. Original Publication Data by Authority

Original Abstracts:

Polyvinyl chloride composition comprising, per 100 parts of PVC resin, from 0.001 to 2 parts, preferably from 0.005 to 1 part of at least one polyorganosiloxane of average formula (1):

(formula 01)

in which the radicals R, which are identical or different, are chosen from methyl and phenyl radicals, at least 60 mol% of the radicals R being methyl radicals, the radical R' is a linear or branched divalent hydrocarbon alkylene chain unit containing from 1 to 18 carbon atoms, p is an integer between 1 and 30, q between 1 and 100.

Application to the debubbling of PVC plastisol and to the lubrication of rigid PVC and of plasticised PVC.
